

Partnered Trial Program

Experience 4 weeks of due diligence on protein targets from the

and receive a complimentary **Partnered Trial Report**

At Current BioData we understand that you and your colleagues are busy and that during the course of your Target Intelligence Service (TIS) trial you might not have the time to review TIS in its entirety. We have therefore initiated the Partnered Trial Program which will help to maximize the value of your company's TIS trial by providing a range of support activities starting before your trial begins, with a pre-trial webinar, and culminating the week after completion of your trial with delivery of the Partnered Trial Report.

As part of the Partnered Trail Program you will receive:

- A **pre-trial webinar** on TIS to highlight the product features and help maximize the value of TIS to your company. More than one of these events can be scheduled depending on the requirements of your company; these can also be tailored to specific user groups within your company.
- **Support from one of CBD's in-house PhD scientist** who will be available to answer any questions you or your colleagues might have about TIS content.
- A **Partnered Trial Report** prepared by the Client Scientific Support team comprising an overview of new target information of interest to you and your colleagues.

The Partnered Trial Report

During your company's TIS trial the Client Scientific Support team will monitor new research being added to TIS in areas that they believe will be of interest to you and your colleagues. In addition to this your company can nominate up to 5 targets to include in the Partnered Trial Report. The Partnered Trial Report will contain a review of the new data added to TIS in these areas during the course of the trial and will highlight advances in the existing knowledge base that have been deemed of particular interest by CBD's in-house PhD scientists who will have prepared a Case Report on the topic.
